

VIBRATION MOTOR CATALOGUE

2017

PRODUCT RANGE

THREEPHASE FOOT-MOUNTED VIBRATION MOTORS

SINGLEPHASE FOOT-MOUNTED VIBRATION MOTORS

VIBRATION MOTORS WITH DC/AC CONVERTER

MICRO VIBRATION MOTORS

FLANGED VIBRATION MOTORS

THREE-PHASE FOOT MOUNTED VIBRATION MOTORS

Foot-mounted vibration motors that have maximum 9197 kgf (90,2 kN) centrifugal force are suitable for vibration machine manufacturer and other sectors in industry.

Miksan Motor's threephase foot-mounted vibration motors can operate in all conditions and environments with high performance. Also, these series have ATEX certification for Zone 21 and 22.

TECHNICAL SPECIFICATIONS

Power Supply

Power supply of vibration motors is 230 Δ /400 Y Volt and 50-60 Hz as a standart. Please contact us for the special voltage and frequency rate.

Electric Motor

Electric motor of vibration motors has higher starting torque than threephase asynchronous electric motor. Over heating problem of the vibration motor due to no vantilation system is taking into consideration at designing.

Polarity

As a standart vibration motors are manufactured in 2, 4, 6 and 8 pole.

Motor Shaft

Motor shaft of vibration motors is produced from C45 structural steel.

Rotor

Rotor is produced with injecting high alloyed alluminium to the channel of the packed siliceous sheet metal.

Bearings

The series with lower centrifugal force (from VA to VC series) are equipped with deep groove ball bearing (2Z) with C3 internal clearance. The series with higher centrifugal force (from VD to VL series) are equipped with cylindrical roller bearings (NJ Series) with C4 internal clearance. All of the bearings, that we are using, are suitable to operate at heavy duty conditions.

Category: II 2 D

Degree of Protection: tD A21 IP66

Temperature Class: 120 °C

ATEX Certificate: ATEX II 2D Extb IIIC (T 120 °C) Db

Useable zone: Zone 21 and 22

Eccentric Weights

The weights can adjust easily by rotating or subtracting according to the type of the vibration motors.

Casing

Casing of vibration motor is high alloyed aluminium from VA series to VE series. For the casing of vibration motors that have higher centrifugal force (from VE series to VL series) is nodular cast iron (GGG 50).

Eccentric Weights Cover

The eccentric weights cover is sheet metal up to VK series. VK and VL series have aluminium weight covers. The purpose of the eccentric weight covers are protecting the eccentric weights from the external factors and providing the safety.

Insulation Class

Insulation class of our standart range vibration motor is F class (155 °C).

Degree of Protection

Degree of protection is IP 66.

Lubrication

Except the vibration motors that used self-lubricated bearings (deep groove ball bearings - 2Z), bearings of the vibration motors (NJ series) are lubricated in our factory. Apart from this, bearings have to be lubricated with the aid of grease nipple that is on the vibration motor case during the maintance. Required grease amount is written in the " Vibration Motor User's Manual.

Painting

Vibration motors are painted with RAL 1003 paint by using electrostatic painting method.

2 POLE

50 Hz-3000 rpm ~ 60 Hz-3600 rpm

*Please contact us for 60 Hz values.

Figure 2

SINGLE-PHASE FOOT MOUNTED VIBRATION MOTORS

Singlephase foot-mounted vibration motors that have maximum 500 kgf (4,9 kN) centrifugal force are suitable for vibration machine manufacturer and other sectors in industry.

Miksan Motor's singlephase foot-mounted vibration motors can operate in all conditions and environments with high performance.

TECHNICAL SPECIFICATIONS

Power Supply

Power supply of vibration motors is 230 Volt and 50-60 Hz as standart. Please contact us for the special voltage and frequency rate.

Electric Motor

Electric motor of singlephase vibration motors has higher starting torque than singlephase asynchronous electric motor. Standart Miksan Motor singlephase vibration motors have permanent split capacitor. Over heating problem of the vibration motor due to no vantilation system is taking into consideration at designing.

Polarity

Standart vibration motors are manufactured in 2 or 4 pole.

Motor Shaft

Motor shaft of vibration motors is produced from C45 structural steel.

Rotor

Rotor is produced by injecting high alloyed alluminium to the channel of the packed siliceous sheet metal.

Bearings

The singlephase vibration motors are equipped with deep groove ball bearing (2Z) with C3 internal clearance.

Eccentric Weights

The weights can adjust easily by rotating or subtracting according to the type of the vibration motors.

Casing

Casing of vibration motor is high alloyed aluminium.

Eccentric Weights Cover

The eccentric weights cover of single phase vibration motor is sheet metal. The purpose of the eccentric weight covers are protecting the eccentric weights from the external factors and providing the safety.

Insulation Class

Insulation class of our standart range vibrtion motor is F class (155 °C).

Degree of Protection

Degree of protection is IP 66.

Lubrication

Our singlephase vibration motors are equipped with self-lubricated bearings (deep groove ball bearings) so, lubrication is not necessary.

Painting

Vibration motors are painted with RAL 1003 paint by using electrostatic painting method.

VIBRATION MOTORS WITH DC/AC CONVERTER

Vibration motors with DC/AC converter that have maximum 200 kgf (1,96 kN) centrifugal force are suitable for vibration machine manufacturer and other sectors in industry.

Miksan Motor's vibration motors with DC/AC converter can operate in all conditions and environments with high performance.

TECHNICAL SPECIFICATIONS

Power Supply

Power supply of vibration motors with DC/AC converter is 24 V DC. Please contact us for the special voltage and frequency rate.

Electric Motor

Electric motor of vibration motor with DC/AC converter has higher starting torque than standart asynchronous electric motor. The electric motor of the vibration motor is fed by converter. Over heating problem of the vibration motor due to no vantilation system is taking into consideration at designing.

Polarity

As a standart vibration motors are manufactured in 2 or 4 pole.

Motor Shaft

Motor shaft of vibration motors is produced from C45 structural steel.

Rotor

Rotor is produced by injecting high alloyed alluminium to the channel of the packed siliceous sheet metal.

Bearings

The vibration motors with DC/AC converter are equipped with deep groove ball bearing (2Z) with C3 internal clearance.

Eccentric Weights

The weights can adjust easily by rotating or subtracting according to the type of the vibration motors.

MICRO VIBRATION MOTORS

Category: II 3 D

Degree of Protection: tc IIIC (T 100 °C) Db, IP65

Temperature Class: 100 °C

ATEX Certificate: ATEX II 3D Extc IIIC (T 100 °C) Dc

Useable zone: Zone 22

Micro vibration motors that have maximum 60 kgf (0,58 kN) centrifugal force are suitable for vibration machine manufacturer and other sectors in industry.

Miksan Motor's micro vibration motors can operate in all conditions and environments with high performance.

TECHNICAL SPECIFICATIONS

Power Supply

Power supply of vibration motors is 230 Volt singlephase or 230 Δ/400 Y Volt threephase and 50-60 Hz as a standart. Please contact us for the special voltage and frequency rate.

Electric Motor

Electric motor of micro vibration motors has higher starting torque than standart asynchronous electric motor. Standart Miksan Motor singlephase micro vibration motors have permanent split capacitor. Over heating problem of the vibration motor due to no vantilation system is taking into consideration at designing.

Polarity

As a standart vibration motors are manufactured in 2 or 4 pole.

Motor Shaft

Motor shaft of vibration motors is produced from C45 structural steel.

Rotor

Rotor is produced by injecting high alloyed alluminium to the channel of the packed siliceous sheet metal.

Bearings

The micro vibration motors are equipped with deep groove ball bearing (2Z) with C3 internal clearance.

Eccentric Weights

The weights can adjust easily by rotating or subtracting according to the type of the vibration motors.

FLANGED VIBRATION MOTORS

Flanged vibration motors that have maximum 2080 kgf (20,4 kN) centrifugal force are suitable for vibration machine manufacturer and other sectors in industry.

Miksan Motor's flanged vibration motors can operate in all conditions and environments with high performance.

TECHNICAL SPECIFICATIONS

Power Supply

Power supply of vibration motors is 230 Volt singlephase or 230 Δ /400 Y Volt threephase and 50-60 Hz as a standart. Please contact us for the special voltage and frequency rate.

Electric Motor

Electric motor of flanged vibration motors has higher starting torque than standart asynchronous electric motor. Standart Miksan Motor singlephase flanged vibration motors have permanent split capacitor. Over heating problem of the vibration motor due to no vantilation system is taking into consideration at designing.

Polarity

As a standart vibration motors are manufactured in 2 or 4 pole.

Motor Shaft

Motor shaft of vibration motors is produced from C45 structural steel.

Rotor

Rotor is produced by injecting high alloyed alluminium to the channel of the packed siliceous sheet metal.

Bearings

The series with lower centrifugal force (from VYF to VCF series) are equipped with deep groove ball bearing (2Z) with C3 internal clearance. The series with higher centrifugal force (VDF and VEF series) are equipped with cylindrical roller bearings (NJ Series) with C4 internal clearance. All of the bearings, that we are using, are suitable to operate at heavy duty conditions.

Eccentric Weights

The weights can adjust easily by rotating or subtracting according to the type of the vibration motors.

Casing

Casing of vibration motor is high alloyed aluminium from VYF series to VEF series. For the casing of vibration motors that have higher centrifugal force (VEF series) is nodular cast iron (GGG 50).

Eccentric Weights Cover

The eccentric weights cover is sheet metal up to VK series. The purpose of the eccentric weight covers are protecting the eccentric weights from the external factors and providing the safety.

Insulation Class

Insulation class of our standart range vibrtion motor is F class (155 °C).

Degree of Protection

Degree of protection is IP 66.

Lubrication

Except the vibration motors that used self-lubricated bearings (deep groove ball bearings - 2Z), bearings of the vibration motors (NJ series) are lubricated in our factory. Apart from this, bearings have to be lubricated with the aid of grease nipple that is on the vibration motor case during the maintance. Required grease amount is written in the " Vibration Motor User's Manual.

Painting

Vibration motors are painted with RAL 1003 paint by using electrostatic painting method.

VIBRATION SYSTEMS AND METHODS

The vibration methods the system that uses vibration motor can be classified as unidirectional or rotational method.

UNIDIRECTIONAL METHOD

Linear vibration force is obtained by aligning the centerline of two electrical vibration motors, each rotating in the opposite direction to the other with the same electro-mechanical characteristics, to the system's centerline.

At the unidirectional method the angle of incidence "i" of the force's line in relation to horizontal plane should be taken into consideration.

App : Amplitude
 i : Angle of incidence
 G : Center of gravity

i (angle)	Processes
6 - 12	Milling industry
25 - 30	Conveying, feeding, unloading, positioning
31 - 45	Separating
45 - 80	Fluidized beds

ROTATIONAL METHOD

The rotational vibration is obtained when vibrating force directed in all direction through 360°, by a single vibration motor.

Application	Material		Speed	Vibration Force		Acceleration
	Specific Weight	Size	n (rpm)	Rotating	Linear	a
Separating Conveying Sieving Positioning Grading Sizing Extracting Feeding	High	Fine	1500-3000		●	4~9
		Medium	1000-1500		●	4~6
		Coarse	750-1500		●	3.5~4.5
	Low	Fine	1500		●	5~7
		Medium	1000		●	4~5.5
		Coarse	750-1000		●	3.5~5.5
Filter cleaning	H/L	F/M/C	1500-3000	●		2~3
Separators (for mills)	H/L	F/M/C	750-1000		●	2~4
Slackening and emptying material in silos, hoppers.	H/L	F/M/C	3000	●		* (1)
Fluidized beds	H/L	F/M/C	750-1000	●		2~4
Vibrating beds	H/L	F/M/C	1500-3000	●		0.7~2
Compacting	H/L	F/M/C	1500-6000	●	●	2~5
Compacting concrete	-	-	3000-9000	●	●	1~2
Accelerated ageing	-	-	400-9000	●	●	0.5~24

*(1) Centrifugal force = Weight of material contained in the vibrating apparatus conic part x 0.1 veya 0.2

How to choose correct vibration motor

I. Method:

- Choose the vibration method (unidirectional or rotational) from the table according to the application.

- Choose the speed from the table according to the application.

- According to the amplitude, centrifugal force (F_c) or statical moment (M) is calculated by using below formulas.

$$F_c = e \times m_t \times \left(\frac{n}{300} \right)^2 \quad [\text{N}]$$

$$M = e \times m_t \quad [\text{kg.mm}]$$

$$e = \frac{App}{2} \quad [\text{mm}]$$

App : Amplitude [mm]

m_t : System mass (including vibration motor mass [kg]

$$m_t = m_{system} + (m_{vib.motor} \times \text{number of motor})$$

e : Eccentricity [mm]
n : Speed [rev/min]

- If the unidirectional method is chosen, calculated centrifugal force or moment should be divided to the number of motors .

- According to the calculated values the vibration motor is chosen from the catalogue.

- On the last step you have to check the vibration motor by using the formula that is shown below. If the calculated acceleration value is match the values that is on table, the motor is suitable.

$$a = \frac{F_c}{m_t} \times \text{number of motor}$$

II. Method:

If the mass of system is known;

- Choose the vibration method (unidirectional or rotational) from the table according to the application.

- Choose the speed from the table according to the application.

- Choose one of the vibration motor from catalogue according to the speed. And specify the centrifugal force and mass of that vibration motor.

- Calculate the mass of system using below formula. Please be careful about the number of motors, if you choose unidirectional method, mass of the motor should multiply by 2. Likewise, the centrifugal force of motor should multiply by 2.

$$m_t = m_{\text{system}} + (m_{\text{vib. motor}} \times \text{number of motor})$$

- Calculate the acceleration value.

$$a = \frac{F_c}{m_t} \times \text{number of motor}$$

- Match the calculated acceleration value from the table. If the Acceleration value doesn't match, choose another vibration motor and do it again the all steps.

APPLICATIONS

- 1a, 1b, 1c : Linear conveying systems,
- 2 : Hoppers, silos applications;
- 3 : Filter cleaning applications.

4)

5)

6)

- 4 : Sieving applications with flanged vibration motors;

- 5 : Circular sieving application with flanged vibration motors;

- 6 : Circular conveying application with single flanged vibration motor or two pieces foot-mounted vibration motors.

EC-Type Examination Certificate

[2] **Equipment or Protective Systems Intended for use in Potentially Explosive Atmospheres**

Directive 94/9/EC

[3] EC – Type Examination Certificate Number : **IEP 14 ATEX 0262**

[4] Equipment : **Vx Series Vibration Motors**

[5] Manufacturer : **MİKSAN MOTOR SANAYİ VE TİCARET A.Ş.**

[6] Address : **Beylikdüzü Organize San. Böl. Bakır ve Pirinç Sanayicileri Sitesi Menekşe Caddesi No:1
Beylikdüzü / İSTANBUL – TURKEY**

[7] This equipment or protective system and any of acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

[8] The IEP Uluslar Arası Enerji Petrol Gözetim , Sertifikasyon ve Teknik Hizmetler Organizasyonu Tic. Ltd. Sti. , notified body number 2284 in accordance with of the Council Directive 94/9/EC of 23 March 1994 certifies that this equipment or protective system has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in Annex II to the Directive. The examination and test results are recorded in confidential Report N : IEP - RP.Ex - 10. 651 date 09.10.2014

[9] Compliance with Essential Health and safety requirements has been assured by compliance with ;

EN 60079-0/2009 ; EN 60079-31/2009

[10] If the sign “ X “ is placed after the certificate number , it indicates that the equipment or protective system is subject to special conditions for safe use specified in the schedule to this certificate.

[11] This EC-Type Examination Certificate relates only to the design examination and testing of the specified equipment or protective system in accordance to the directive 94/9/EC. Further requirements of the directive apply to the manufacturing process and supply of this equipment or protective system. These are not covered by this certificate.

[12] The marking of the equipment or protective system shall include the following :

 **II 2 D Ex tb IIC (T 120 °C) Db , IP66**

Responsible person :

Nurettin Terzioğlu
Head of certification body

Date of issue : 15.10.2014
